

## VALTEK Control Valves

From Mark One globe valves to Valdisk™ and ShearStream™ rotary valves to custom-engineered valves, Valtek control products have earned a reputation for being high quality control valves. This reputation has been gained not only with standard control valves, but also for Valtek advanced products such as StarPac™ intelligent systems and Logix™ digital valve controllers.

Valtek control products are also known for handling the most severe services: cryogenic, superheated steam, volatile and corrosive fluids, erosion, high pressure drops, vibration, cavitation, flashing, and high noise levels.

Valtek valves are equipped with spring cylinder or spring diaphragm actuators that provide the thrust and speed necessary to manage any service. Valtek four-way analog and digital positioners provide accuracy and response to handle the most exacting applications.

### Features

- Reliability - over a million cycles typical
- High rangeability - up to 300:1
- Tight shut-off - Class VI bubble tight available
- High pressure drops - erosion resistant, excellent control
- Anti-cavitation - TigerTooth, CavControl, and CavStream designs
- Low noise - up to 30 dB noise reduction

Now stocking VALTEK GS range of globe type control valves and positioners. Modular, compact and lightweight, the VALTEK GS offers optimised performance and reliability across all general service flow control applications.

Our trained staff can produce sizing calculations, in house, using the Flowserve Performance! sizing software.
